

The first textbook to present catalysis in a coherent, unified manner!

CATALYTIC CHEMISTRY

Bruce C. Gates, University of Delaware
51761-5, 432 pp., 1992

Gathering catalysis material from the fields of chemical reaction engineering, chemical engineering, kinetics, organometallic chemistry, and physical chemistry, this unique text presents the first unified, easy-to-teach treatment of catalytic chemistry. This exciting new text:

- Demonstrates to students that the fragments to which they have been exposed in other courses constitute a large, important, challenging and opportunity-rich subject.
- Includes an outline of the subject with examples, problems and solutions. Instructors can emphasize and build on specific subject areas.
- Is full of practical knowledge and can be used by both scientists and engineers working in the discipline, including researchers and industry experts.

A Solutions Manual (54588-0) with Answers and Solutions to most problems is available upon adoption.
