

Process Sensing and Diagnostics

Edited by: Jaromir J. Ulbrecht

AICHE Symposium Series Vol. 85, No. 267

These papers, presented at the AIChE Annual Meeting in Washington, D.C. in 1988, analyze various aspects of integrating sensors with microprocessors and include presentations reporting the exploitation of optical, electrical, electrochemical, electromagnetic, and other phenomena to monitor a wide range of physical, chemical and biochemical variables.

Contents: Chemical Sensing on the Factory Floor.

Electrochemical Sensors Produced by Microelectronic Fabrication Techniques.

Micron and Submicron Electrochemical Sensors.

Integrated Microsensors.

Feedback Strategies in Multiple Sensor Systems.

Synergism Between Applied Statistics and Sensor/Microcomputer Technology.

Development of a Process Diagnosis Scheme Using AI Techniques.

pH Sensors Based on Iridium Oxide.

Applying Capacitance Sensors.

Model Studies of Tin Oxide-Based Gas Sensors.

Determination of Solids Fraction in Slurries by Radio Frequency Diagnostic Techniques.

A System Approach to Ingestible Temperature Monitoring.

Thin Film Thermocouples for Heat Engines.

Spectroscopic Sensors for Bioprocessing.

On-Line Process Monitoring for Optical Density in Fermentations.

Rapid Microbe Detection Through Membrane Mediated Fluorescence.

Biosensors for Bioprocessing.

A New Sensing System for Continuous Specific Gravity Measurement in Fermenters.

Transient Measurements and Analyses of Biosensors.

1989 106 pp.
