

Union Carbide

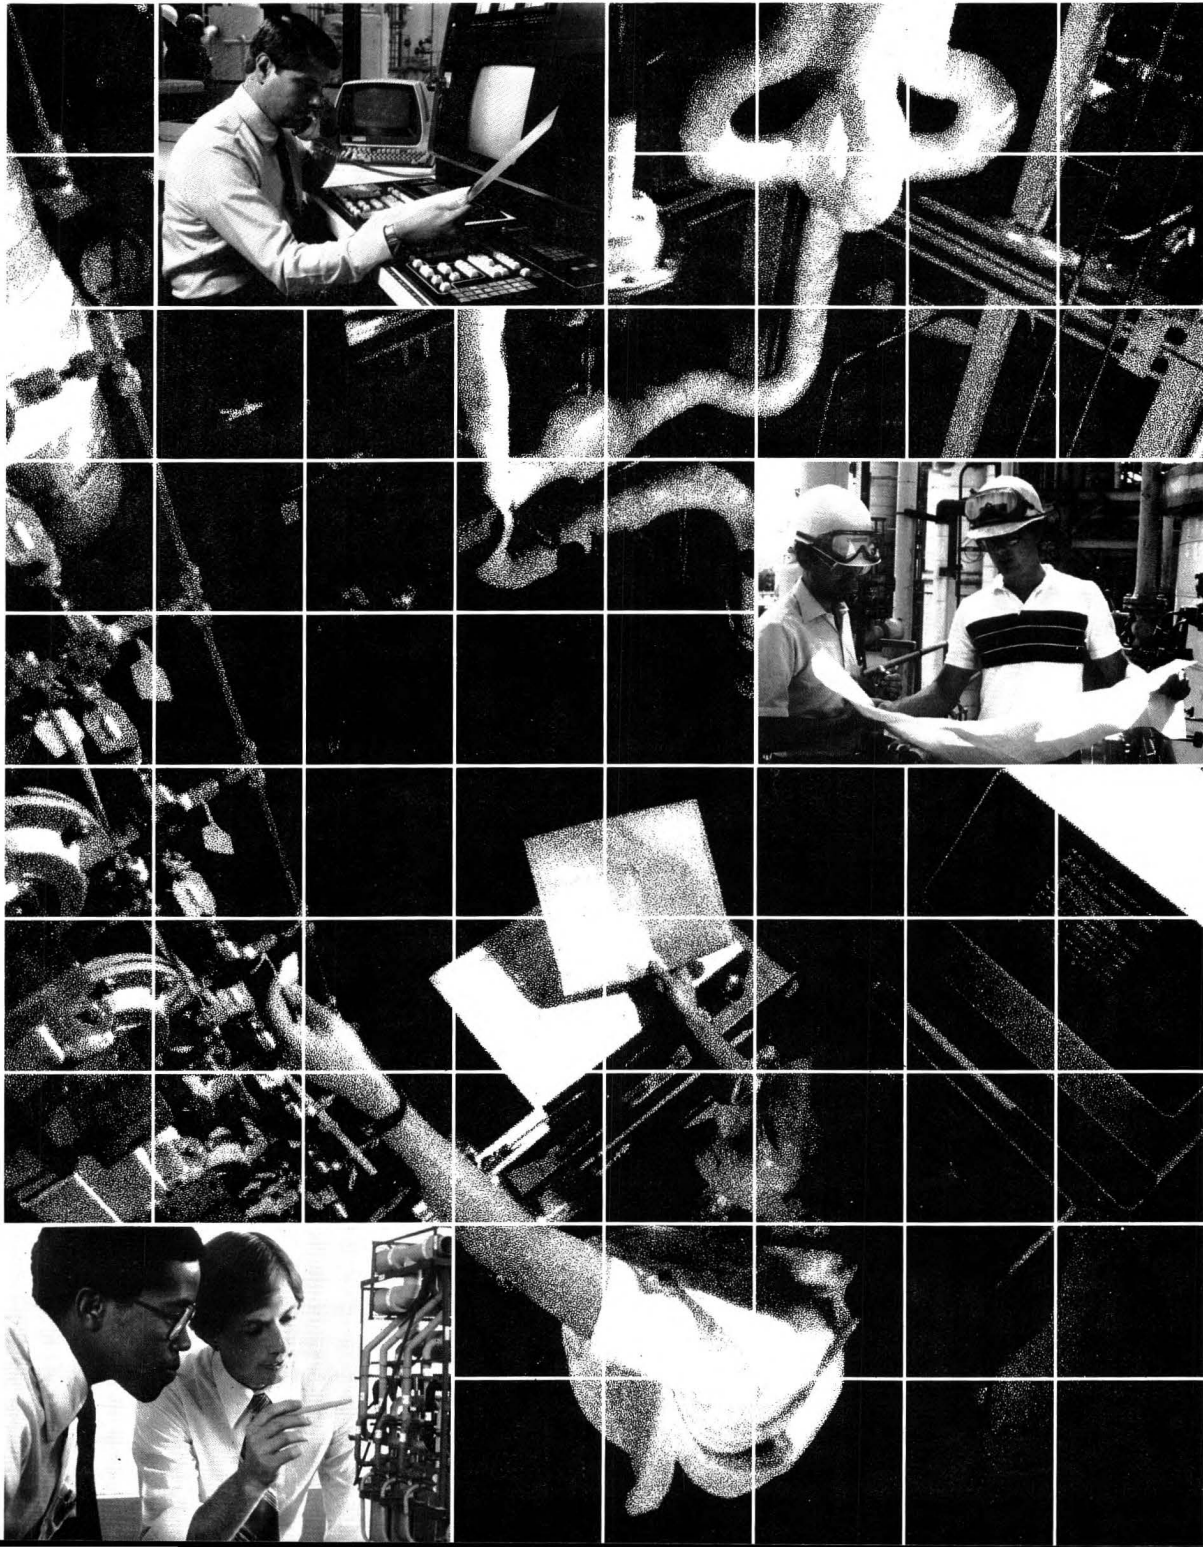

*Streamlined
for Success*

Union Carbide Corporation is one of the nation's major industrial companies. We employ more than 50,000 people at 700 plants and facilities in 37 countries, and market our products in about 130 countries.

Over the past few years, we have become a more streamlined, simplified and focused organization, structured to respond effectively to rapidly changing economic and market conditions.

Our principal businesses include chemicals and plastics, industrial gases, and carbon products.

Union Carbide is one of the world's leading producers of ethylene oxide/glycol and polyethylene. We have the widest range of solvents of any U.S. chemical company and are the largest domestic supplier of industrial gases. We're also the world's largest producer of carbon and graphite electrodes for steel-making.
