

"Just over two years with DuPont, and I'm a process engineer on a multimillion dollar plant expansion."

Maria Williams, BS, Chemical Engineering

"In just over two years, I've gone from college to designing and specifying equipment for the expansion of one of DuPont's Textile Fibers plants.

"As a process engineer, I'm not only involved with all kinds of equipment, but I'm also getting the chance to work with design engineers, construction engineers, architects, even outside suppliers. It's a big responsibility, and I really enjoy it.

"I had a lot of job offers during my last semester at Cornell, but I chose DuPont because they offered me an assignment with real responsibility, right from the beginning. They put me in charge of finding the cause of product defects and determining the process changes necessary to correct them.

"Now I'm a process engineer on a multimillion-dollar project. DuPont gave me a chance to go a long way in a short time."

If you're a graduating engineer who wants responsibility and the opportunity to start a challenging career, set up an interview next time a DuPont representative is on campus. Or write: DuPont Company, Room 38244, Wilmington, DE 19898.

At Du Pont... there's a world of things you can do something about.
