

# NEW AND BEST-SELLING BOOKS FROM WILEY-INTERSCIENCE

## APPLIED SYMBOLIC LOGIC

Edward P. Lynch

This book offers students a basic foundation in applied symbolic logic as a powerful communications tool. The author explains three applications of the logic: the use of Boolean algebra in graphic form to show the relationships in any system of on-off events; a new development involving implication and inference; and the use of symbolic logic in fault tree analysis.

approx. 272 pp. (1-06256-1) **Sept. 1980** \$36.00

## CHEMISTRY OF COAL UTILIZATION Second Supplementary Volume

Edited by Martin A. Elliott

This new supplement brings up to date information in the original two-volume reference published in 1945 under the editorship of H.H. Lowry, and the First Supplement issued in 1963. References in this new volume are made to the (still available) earlier volumes. This second supplement updates the literature on the science and technology of coal utilization. New topics include coal research and development, coal resources, and environmental health and safety implications of increased coal utilization.

approx. 2600 pp. (1-07726-7) **Aug. 1980** \$150 (tent.)

## FERMENTATION AND ENZYME TECHNOLOGY

Daniel I.C. Wang, Charles L. Cooney, Arnold L. Demain,  
Peter Dunnill, Arthur E. Humphrey, & Malcolm D. Lilly

A practical, up-to-date introduction to fermentation and enzyme technology. It outlines the fundamental microbiological, biochemical, genetic, and engineering aspects of fermentation—presenting advanced methods of fermentation and control. Covers the isolation of enzymes, especially those found in intracellular contents of microorganisms. Discusses enzyme immobilization and the factors influencing the use of enzymes in reactors.

374 pp. (1-91945-4) **1979** \$28.95

## CORROSION OF STAINLESS STEELS

A. John Sedriks

Designed to provide a perspective and introduction for students entering the fields of corrosion, materials selection, and component and plant maintenance. The book bridges the gap between texts dealing with metallurgy, fabrication, and other aspects of stainless steels where corrosion discussion is limited, and those dealing at length with narrow and specialized aspects of their corrosion.

282 pp. (1-05011-3) **1979** \$32.00

## PRINCIPLES OF INDUSTRIAL CHEMISTRY

Chris A. Clausen III & Guy Mattson

This book uses process development as a general theme to provide chemistry students with information that previously has been acquired only through on-the-job training. It presents concepts in unit operation and their application, and traces an industrial chemical process from the idea stage to a fully operational plant. Covers material accounting, energy accounting, mass transport, heat transfer, principles of kinetics, separation methods, and instrumentation.

412 pp. (1-02774-X) **1978** \$22.50

## DIFFUSIONAL MASS TRANSFER

A.H.P. Skelland

This volume presents an integrated treatment of diffusive and convective mass transfer, and describes a representative selection of topics, many of which are common to a wide variety of applications. The derivation of important or exemplary relationships is given in sufficient detail to enable a clear understanding of practical applications.

510 pp. (1-79374-4) **1974** \$40.95

Books under consideration as classroom texts are available for 60-day free examination. Write to Jules Kazimir.

## KINETICS OF COAL GASIFICATION

The late James Lee Johnson

Now, the major works of James Lee Johnson—who, until his untimely death in November, 1977, was one of the leading authorities in this area—are available in this single volume. By presenting a series of Dr. Johnson's publications, this book traces the development of coal gasification kinetics—providing the best description of coal gasification reactions available. The book puts gasification kinetics into perspective for reactor design through discussions of gasification thermodynamics, fluidized beds, and the physical characterization of coals and coal chars for estimating gasification reactivity.

324 pp. (1-05575-1) **1979** \$23.50

## THE EXERGY METHOD OF ENERGY SYSTEMS ANALYSIS

John E. Ahern

This book applies the second law of thermodynamics to energy-related systems as an aid to improving plant and system performance and to reducing energy expenditure in plant design and operation. Simplifies the procedure for making an exergy analysis—with data from conventional first law heat balance providing the input to the exergy calculation—to determine the real energy changes in the work of the system, process by process.

295 pp. (1-05494-1) **1980** \$27.50

## AN INTRODUCTION TO PROCESS DYNAMICS AND CONTROL

Thomas W. Weber

Presents a balanced picture of the theoretical and practical aspects of process control and dynamics. Examines the most common methods of control—open loop, feedback, feedforward, and environmental methods—and describes the standard controller actions (on-off, proportional, reset, and derivative), explaining which should be used for given processes and how much control should be used.

434 pp. (1-92330-3) **1973** \$36.95

## NUCLEAR POWER REACTOR SAFETY

E.E. Lewis

Discussing nuclear safety as it pertains to power reactor accidents that may lead to releases of radioactive materials into the environment, this book emphasizes situations with potential for causing significant public health problems. The interdisciplinary nature of reactor safety is stressed, as is the interaction of neutronic, thermal-hydraulic materials phenomena during reactor transients. Materials on the modeling of reactivity feedback, hydraulic behavior, and other aspects of transient analysis are also included.

630 pp. (1-53335-1) **1977** \$43.50

## OPTIMIZATION AND INDUSTRIAL EXPERIMENTATION

William E. Biles & James J. Swain

The unification of the theory and methodology of optimization with well-known statistical and experimental methods is the focus of this book. It is directed toward situations where experimentation is the only way to characterize a system, where such experimentation is implicitly expensive, and optimization is desired. As a textbook for senior or graduate level courses in Experimental Optimization, the book requires only mathematical maturity in calculus and matrix algebra.

368 pp. (1-04244-7) **1980** \$32.50

## PULP AND PAPER

Chemistry and Chemical Technology, 3rd Ed.,  
Vols. 1, 2, & 3

James P. Casey

Here's an in-depth look at the chemistry and chemical technology involved in the manufacture of pulp and paper, the properties of paper, and the uses for paper. The new edition contains contributions by forty recognized authorities in the field. Emphasizing the underlying science and technology, this edition reviews, in detail, chemical and engineering principles. Includes numerous tables, illustrations, and a complete bibliography.

Vol. 1: 820 pp. (1-03175-5) **1980** \$55.00  
Vol. 2: approx. 768 pp. (1-03176-3) **Nov. 1980** \$39.95 (tent.)  
Vol. 3: approx. 700 pp. (1-03177-1) **Nov. 1980** \$48.50 (tent.)

## SYNTHETIC FUELS FROM COAL

Larry L. Anderson and David A. Tillman

A timely, detailed description of the principles, processes and products of coal conversion systems. Weighs the need for alternatives to gas and oil, and the prospects of coal conversion, its costs, and its environmental consequences, providing a managerially-oriented perspective on the technical and economic realities of producing synthetic fuels from coal.

158 pp. (1-01784-1) **1979** \$16.95
