

# WHAT?

# WORK FOR EXXON?

With all the talk about dwindling energy supplies and such, we're often asked if this is any time to work for a company like Exxon. Our answer is always the same: "Yes, if . . ."

- Yes, if you can help tackle society's critical need for oil and gas and coal . . . for nuclear and solar energy . . . for petrochemicals and minerals . . . because at Exxon we're involved in all those fields.
- Yes, if you're attracted to such non-energy areas as information systems, space-age materials and advanced business systems . . . because at Exxon we're involved in these and other new ventures.
- Yes, if your down-the-road hopes might include overseas service, because Exxon's world-wide affiliates often look to our U.S. operations for specialized skills.
- Yes, if you want to be part of a growth company . . . because at Exxon our U.S. work force will increase by 30 percent in the next three years.
- Yes, if you want challenge . . . because at Exxon the challenges are many and diverse and show no signs of abating.

In short, we think this is a very good time to work for Exxon. Candidates for engineering and other degrees, see your placement officer or send your resume to Exxon, Professional Recruitment, P.O. Box 2180, Houston, Texas 77001.
