

What we're doing for your health is a lot more comforting than a bowl of chicken soup.

Little things at home relieve a lot of your misery. But we offer human solace too.

Many medicines you find at a drug-store are made with our chemicals.

Aspirin to bring down your burning fever, lozenges to soothe your poor sore throat, sedatives to let you fall asleep at last.

We're also involved in more serious things.

We make radioactive diagnostic materials that pinpoint cancer.

And plastic for heart valves human beings can live with.

We invented an Oxygen Walker. It helps people with emphysema move freely around again.

Our CentrifChem[®] blood analyzer helps a hospital make more than 20 vital blood tests with up to 300 chemical analyses an hour.

Much of the life-saving oxygen in a hospital is ours.

And we constantly experiment.

We are 123,000 involved human beings who work all around the world on things and ideas for every basic need.

So today, something we do will touch your life.

And may even help save it.

**Today, something we do
will touch your life.**
