

We're expecting a few extra people for dinner tonight.

Tonight, the world will have 213,000 more mouths to feed than it had last night.

Unfortunately, we're not growing food as fast as people.

But there's still hope of reversing the trend.

Modern technology is increasing the production of staple food crops in many countries.

This "green revolution" is something Union Carbide is very much a part of.

We make insecticides that not

only save food crops from bugs, but destroy themselves afterwards.

Another of our products protects high-moisture feed grains against spoilage from molds. So more of the crop ends up as meat.

We've also developed better ways to store, transport and package food.

And we're working on other new ideas: A seed tape that's already helping farmers grow more food per acre of land.

An amazing gel that helps

plants grow faster with less water.

And a sea farm where we're raising salmon by the thousands.

Helping the world grow more food is not the only thing we do. But it's one of the most important.

Because those 213,000 guests are coming — whether we're ready or not.
