

CHEMICAL ENGINEERS GET TOTALLY INVOLVED IN A TOTAL ENGINEERING ENVIRONMENT AT ESSO

Esso Research and Engineering Company, the principal technical affiliate of Standard Oil Company (N. J.), provides research and engineering services to 250 worldwide affiliates with assets of over *thirteen billion dollars*.

The Chemical Engineer plays a vital role in helping us meet these vast responsibilities. But most important to him, he functions in an environment as dedicated as that of the university Chemical Engineering department. For our

ultimate goal is the same as that of the university; namely the extension of knowledge and the betterment of the human condition through long-term fundamental and applied research, and the accomplishment of immediate objectives through the economical design and operation of plants and equipment.

Whether he possesses a B.S., an M.S., or a Ph.D., and whether he works in Product/Process Research and Development, Appli-

cations and Technical Services, Process Engineering, Project Design or Process Selection and Economics, the Chemical Engineer serves with his professional peers. He learns from them; he teaches them. But he advances as far as his own talents take him, wherever his interests lead him; either in a technical or administrative capacity.

Total involvement . . . in a total chemical engineering environment. That's Esso.
