

# CHEMICAL ENGINEERS

Sure, we're world-wide; everyone knows we're a leader in the petroleum industry and it's no secret that our people explore for, produce, refine and market a large portion of the world's petroleum and petroleum products.

The story behind our success lies in our people . . . people like yourself . . . aggressive and imaginative CHEMICAL ENGINEERS constantly searching for a better way. It is through their efforts, in our Research & Development Centers, as well as those of their professional colleagues and an aggressive management team, that we have been able to achieve and maintain our leadership position.

You too, can be part of this winning combination. For Chemical Engineers with a B.S. or M.S., the professional and economic rewards of a Texaco career in process and product development have never been greater. Our congenial shirt sleeve atmosphere, along with our practice of basing promotions on performance and ability, can make YOU one of our important additives.

We have immediate openings at our laboratories in Beacon, N.Y., Richmond, Va., Port Arthur, and Bellaire, Texas for qualified Chemical Engineers who already are, or are in the process of becoming U.S. Citizens. Interested candidates are invited to send their resume to:

Mr. W. R. Hencke, Texaco, Research & Technical Department, P.O. Box 509, Beacon, N.Y. 12508

Texaco is an equal opportunity employer.
