

**They're already looking for the fuels we'll use in 1978.
Isn't that the kind of company you'd like to work for?**

In just ten years, our world will need 40% more petroleum. And there may not be 40% more available. So the people at Atlantic Richfield's new Production Research Center—the largest and most modern in the

world—are working on the problem now. Searching for new materials, new ways to meet those growing energy needs. It's the kind of project that takes people with ideals and energy. People like you. We

need your ideas—and your motivation—to help make things happen. Talk to our interviewer when he is on your campus. Or send a resume to Mr. G. O. Wheeler, 717 Fifth Ave., New York, N.Y. 10022
