

NEW FROM WILEY
FOR YOUR UNDERGRADUATE CURRICULUM!

*A Contemporary Introduction to all the
Essentials of Dynamic Behavior & Automatic
Control Processes!*

PROCESS DYNAMICS & CONTROL

DALE E. SEBORG, *U. of California, Santa Barbara*

THOMAS F. EDGAR, *U. of Texas, Austin &*

DUNCAN A. MELLICHAMP, *U. of California, Santa Barbara*

1989 • 714 pp. • cloth • 86389-0

Striking an appropriate balance between process instrumentation and control methodology, this in-depth examination includes the latest control strategies...from model-based, predictive and supervisory control to six full chapters on digital control. The book emphasizes the advantages of dynamic process models, and offers a definitive treatment of such topics as empirical modeling, controller tuning, control-loop troubleshooting, CAD techniques, feed-forward control, and sampling and filtering. Numerous examples and exercises clarify the material, and an appendix on software for control system design is included.

*A Comprehensive Study of Chemical
Reaction Engineering...
For Both Graduates & Undergraduates!*

**CHEMICAL REACTOR ANALYSIS
& DESIGN, Second Edition**

G. F. FROMENT, *Rijks Universiteit-Gent, Belgium &*

KENNETH BISCHOFF, *U. of Delaware*

1990 • 733 pp. • cloth • 51044-0

From basic definitions to practical applications, the Second Edition of this comprehensive text completely covers applied kinetics and reactor analysis and design. Maintaining the first edition's successful basics approach to industrially-related problems, this edition reflects contemporary progress in modeling and the latest developments in computer capability. Its two part organization allows readers to study the detailed kinetics in a given point or local region first, and then extend the specific application to overall reactor behavior. And, the text's insightful coverage of abstract topics and current literature make it an up-to-date handbook or reference students can use in their careers.
