**PHOTO 147.** A low tide view of the North Sea beach at Noordwijk, The Netherlands, looking south. A strong NW wind is blowing. Original 3-bar foreshore topography is levelled by heavy surf. Coastline stabilized since ca. 1850. Note recently replanted erosional gap in foreshore. Foredune flattened to offer a room-with-a-view. (Caption: Bert van der Valk, Institute of Earth Sciences, Free University, 1007 MC Amsterdam, The Netherlands).
